# Introduction

Treasury Management is the management of Derbyshire Pension Fund's (the Fund) cash flows and associated risks. The Fund invests substantial sums of money and is, therefore, exposed to financial risks, including the loss of invested funds and the revenue effect of changing interest rates. The successful identification, monitoring and control of financial risk is, therefore, central to the Fund's prudent financial management.

The Fund's day-to-day Treasury Risk Management is managed by Derbyshire County Council's (the County Council) Treasury Management Team, with monitoring by the Fund's In-House Investment Management Team. The Fund's Treasury Risk Management is conducted within the framework of the Chartered Institute of Public Finance and Accountancy's "*Treasury Management in the Public Services: Code of Practice 2021 Edition*" (the CIPFA Code).

This report fulfils the County Council's legal obligation, as the administering authority of Derbyshire Pension Fund, under the Local Government Act 2003 to have regard to the CIPFA Code.

The Fund's Pensions and Investments Committee is required to approve the Fund's Treasury Management Strategy before the start of each financial year.

## 1. External Context

**Economic background:** The outlook for the UK economy, which remains muted, together with the impact from uncertainties around US domestic & foreign policy and wider geopolitics, are major influences on the Fund's Treasury Management Strategy for 2026-27.

**Credit outlook:** Credit Default Swap (CDS) prices, which spiked in April 2025 following US President Trump's 'Liberation Day' tariff announcements, have since trended lower, returning to levels broadly consistent with their 2024 averages. Although CDS prices rose modestly in October 2025, the overall credit outlook remains stable, and credit conditions are expected to remain close to the range seen over the last two years.

**Interest rate forecast:** The Bank of England's (BoE) Monetary Policy Committee (MPC) started to reduce its official Bank Rate from a recent peak of 5.25% at its August 2024 MPC meeting. This has been followed by further cuts, with the last cut in December 2025, reducing the Bank Rate to 3.75%. The Council's Treasury Management Adviser, Arlingclose, forecasts that the BoE's MPC will continue reducing rates during 2026, reaching around 3.25%.

## 2. Local Context

On 31 January 2026, the Fund held £307m of cash. This is set out in further detail at Appendix A.

## 3. Borrowing Strategy

Borrowings are permitted only in exceptional circumstances and in accordance with the Local Government Pension Scheme (Management and Investment of Funds) Regulations 2016. Borrowings are limited to the maximum amount required to meet the Fund's obligations and should not exceed 90 days in duration.

#### 4. Sources of Borrowing

Any UK public sector body (except for Derbyshire County Council).

The Fund's main bank (currently Lloyds).

#### 5. Treasury Investment Strategy

The Fund has historically held significant cash balances. In the past 12 months these balances have ranged from £172m to £314m. Over 2026-27, the Fund expects to hold increasingly less cash because the day-to-day management of the Fund's investment cash, including the receipt of investment income and funding future commitment drawdowns, will transition over to LGPS Central Limited as part of the Ministry of Housing, Communities and Local Governments expected Fit for the Future guidance on asset pooling for LGPS funds. The Fund's cash holdings post transition will be limited to ensuring that there is sufficient liquidity to manage the Fund's operational requirements (i.e. meet the net requirements of dealing with members and settling the Fund's operational expenses). This is expected to be in the region of around £100m to £150m, equating to around 1.5% to 2.0% of the Fund's current asset values. It is also expected that a mechanism will be put in place to allow the Fund to draw-down additional liquidity, as and when required, from the investment cash managed by LGPS Central Limited.

The CIPFA Code requires the Fund to invest its treasury funds prudently, and to have regard to the security and liquidity of its investments before seeking the highest rate of return, or yield. The Fund's primary strategy for cash is liquidity in order to take advantage of any market opportunities that may arise and finance ongoing investment commitments. The Fund's objective when investing money is to strike an appropriate balance between risk and return.

**Negative interest rates:** The Fund believes that the risk of negative interest rates is minimal at present based on the current inflationary outlook and forward interest rate expectations.

**Strategy:** The Fund's objective when investing money is to strike a balance between risk and return, minimizing the risk of incurring losses from defaults and the risk of receiving unsuitably low investment income. The majority of the Fund's surplus cash is currently invested in Money Market Funds and Short Dated Investment Grade Bond Funds.

**Business models:** Under the IFRS 9 standard, the accounting for certain investments depends on the Fund's 'business model' for managing them. The Fund aims to achieve value from its internally managed treasury investments by a business model of collecting the contractual cash flows and, therefore, where other criteria are also met, these investments will continue to be accounted for at amortised cost.

**Approved counterparties:** The Fund may invest its surplus funds with any of the counterparty types in the table set out below, subject to the cash limits (per counterparty) and the time limits shown.

**Table 1: Approved investment counterparties and limits**

Sector	Time Limit	Counterparty Limit	Sector Limit
UK Government	Unlimited	Unlimited	Unlimited
Local Authorities & Other Government Bodies	13 months	£10m	Unlimited
Banks (unsecured) *	13 months	£10m	£100m
Building Societies (unsecured) *	13 months	£10m	£50m
Money Market Funds (MMF) *	n/a	£60m	Unlimited
Short Term Pooled Bond Funds	n/a	£50m	£100m

**Pension Fund Main Operation Bank Account:** The overnight limit for the Fund’s main operational bank account of £125m is maintained to minimise transaction risk and allow sufficient short-term liquidity to allow the Fund to trade.

**Pension Fund Currency Accounts:** US\$/€: Additional limits of US\$1,000,000 and €1,000,000 are maintained for lower value currency receipts.

**Pension Fund Custodian Accounts:** A custodian is a financial institution that holds a customer’s securities (e.g. directly held shares) for safekeeping to minimise the risk of theft or loss. The Fund’s current custodian is Northern Trust.

Northern Trust (In House Account): The existing limit of £60m is maintained to minimise transaction risk.

BNP Paribas: A limit of £1m for the former custodian is retained for receipt of outstanding tax claim rebates.

BNY Mellon: A limit of £1m for the former custodian is retained for the receipt of outstanding tax claim rebates.

**Minimum Credit rating:** Treasury investments in the sectors marked with an asterisk (\*) will only be made with entities whose lowest published long-term credit rating is no lower than A-. Where available, the credit rating relevant to the specific investment or class of investment is used, otherwise the counterparty credit rating is used. However, investment decisions are never made solely based on credit ratings, and all other relevant factors including external advice are considered.

**Government:** Loans, bonds and bills issued or guaranteed by national governments, regional and local authorities and multilateral development banks. These investments are not subject to bail-in (i.e. cancellation of debt owed to creditors to provide relief to the borrower) and there is generally a lower risk of insolvency, although they are not zero risk. Investments with the UK Central Government are deemed to be zero credit risk due to its ability to create additional currency and, therefore, may be made in unlimited amounts for unlimited duration.

**Banks and building societies (unsecured):** Accounts, deposits, certificates of deposit and senior unsecured bonds with banks and building societies, other than multilateral development banks. These investments are subject to the risk of credit loss via a bail-in should the regulator determine that the bank is failing or likely to fail. See below for arrangements relating to operational bank accounts.

**Money market funds:** Pooled funds that offer same-day or short notice liquidity and very low or no price volatility by investing in short-term money markets. They have the advantage over bank accounts of providing wide diversification of investment risks, coupled with the services of a professional fund manager in return for a small fee. Although no sector limit applies to money market funds, the Council will take care to diversify the Fund's liquid investments over a variety of providers to ensure access.

**Short Dated Pooled Bond Funds:** Pooled funds that offer same-day or short notice liquidity and comprise government or investment grade bonds with a short duration (typically less than five years). These bonds are typically held to maturity. These investments are subject to the risk of credit loss.

**Operational bank accounts:** These are not classed as investments, but are still subject to the risk of a bank bail-in. BoE has stated that in the event of failure, banks with assets greater than £25 billion are more likely to be bailed-in than made insolvent, increasing the chance of the Council maintaining operational continuity, albeit still subject to the risk of credit loss.

**Risk assessment and credit ratings:** Credit ratings are obtained and monitored by the County Council's Treasury Management Adviser, who will notify changes in ratings as they occur. Where an entity has its credit rating downgraded so that it fails to meet the minimum approved investment criteria then:

- no new investments will be made;
- any existing investments that can be recalled or sold at no cost will be; and
- full consideration will be given to the recall or sale of all other existing investments with the affected counterparty.

Where a credit rating agency announces that a credit rating is on review for possible downgrade (also known as "negative watch") so that it may fall below the minimum approved rating criteria, then only investments that can be withdrawn on the next working day will be made with that organisation until the outcome of the review is announced. This policy will not apply to negative outlooks, which indicate a long-term direction of travel rather than an imminent change of rating.

**Other information on the security of investments:** The Fund understands that credit ratings are good, but not perfect, predictors of investment default. Full regard will, therefore, be given to other available information on the credit quality of the organisations in which it invests, including credit default swap prices, financial statements, information on potential government support, reports in the quality financial press and analysis and advice from the Council's Treasury Management Adviser. No investments will be made with an organisation if there are substantive doubts about its credit quality, even though it may otherwise meet the above criteria.

When deteriorating financial market conditions affect the creditworthiness of all organisations, as happened in 2008 and 2020, this is not generally reflected in credit ratings, but can be seen in other market measures. In these circumstances, the Fund will restrict its investments to those organisations of higher credit quality and reduce the maximum duration of its investments to maintain the required level of security. The extent of these restrictions will be in line with prevailing financial market conditions. If these restrictions mean that insufficient commercial organisations of high credit quality are available to invest the Fund's cash balances, then the surplus will be deposited with the UK Government or with other Local Authorities. This would be expected to cause investment returns to fall but should protect the principal sum invested.

**Investment limits:** The Fund's cash balance is forecast to be around £300m on 31 March 2026. To minimise risk in the case of a single default, the maximum that will be lent to any one organisation (other than the UK Government, Money Market Funds, Northern Trust (custodian), short dated

Pooled Bond funds or Lloyds Bank operational bank accounts as previously detailed) will be £10m and capitalised interest. A group of banks under the same ownership will be treated as a single organisation for limit purposes. Limits will also be placed on fund managers, investments in brokers' nominee accounts, foreign countries and industry sectors as below. Investments in pooled funds and multilateral development banks do not count against the limit for any single foreign country, since the risk is diversified over many countries.

**Table 2: Additional investment limits**

	Cash limit
Negotiable instruments held in a broker's nominee account	£100m per broker
Foreign countries	£30m per country

**Liquidity management:** The Fund uses Excel spreadsheets and staff knowledge, skills and experience to determine the maximum period for which funds may prudently be committed. The forecast is compiled on a prudent basis.

## 6. Treasury Management Indicators

The Fund measures and manages its exposures to Treasury Management risks using the following indicators:

**Security:** The Fund has adopted a voluntary measure of its exposure to credit risk by monitoring the value-weighted average credit rating of its investment portfolio. Unrated investments are assigned a score based on their perceived risk.

Credit risk indicator	Target
Portfolio average credit rating	A

**Liquidity:** – The Fund has adopted a voluntary measure of its exposure to liquidity risk by monitoring the amount of cash available to meet unexpected payments within a rolling three-month period.

Liquidity risk indicator	Target
Total cash available within 1 month	£100m

## Related Matters

The CIPFA Code requires the Fund to include the following information in its Treasury Management Strategy:

**Financial Derivatives:** The Fund only uses financial derivatives for currency hedging of the Fund's Overseas Income Assets (e.g. property, private debt and infrastructure) and Overseas Protection Assets (e.g. sovereign bonds) (US\$ and €).

**Markets in Financial Instruments Directive:** The Fund has opted up to professional client status with its providers of financial services, including advisers, banks, brokers and fund managers, allowing it access to a greater range of services but without the greater regulatory protections afforded to individuals and small companies.

## Other Options Considered

The CIPFA Code does not prescribe any particular treasury management strategy for local authorities to adopt. The Fund believes that the above strategy represents an appropriate balance between risk management and cost effectiveness. Some alternative strategies, with their financial and risk management implications, are listed below.

<b>Alternative</b>	<b>Impact on income and expenditure</b>	<b>Impact on risk management</b>
Invest in a narrower range of counterparties and/or for shorter times	Interest income likely to be lower	Lower chance of a counterparty defaulting (i.e. because there are fewer counterparties) but any such losses are likely to be greater because there is less diversification
Invest in a wider range of counterparties and/or for longer times	Interest income likely to be higher	Increased risk of losses from credit related defaults, but any such losses may be smaller

## Appendix A – Existing Investment Position

	31/1/2026 Actual Portfolio £m
<b>Treasury Investments:</b>	
Fund's Main Bank (unsecured)	5
Money market funds	233
Custodian	8
Short Dated Bond Funds	57
Other including investment trading timing differences	4
<b>Total Treasury Investments</b>	<b>307</b>
